

CLAIMS:

1. A method of distributing and laying, inside a building, optical fiber cables drawn into the building from a trunk cable,
5 the method comprising passing the optical fiber cables through the inside of a gutter or drain pipe.
2. The method of distributing and laying optical fiber cables of claim 1, wherein the occupied cross-sectional area of the
10 optical fiber cables passed through the inside of the gutter or drain pipe is equal to or less than 50% of the cross-sectional area of the inside of the gutter or drain pipe.
3. The method of distributing and laying optical fiber cables
15 of claim 1 or 2, wherein a branch pipe is connected to the gutter or drain pipe, and wherein at the portion where the branch pipe is connected to the gutter or drain pipe, the optical fiber cables passed through the inside of the gutter or drain pipe are gathered at an inner side of the gutter or drain pipe opposite to the
20 connection portion.
4. The method of distributing and laying optical fiber cables of any one of claims 1 to 3, wherein a partition plate is disposed inside the gutter or drain pipe.
- 25 5. The method of distributing and laying optical fiber cables of any one of claims 1 to 3, wherein a sheath tube is passed through

the inside of the gutter or drain pipe, and wherein the optical fiber cables are passed through the sheath tube.

6. The method of distributing and laying optical fiber cables of any one of claims 1 to 3, wherein sheath tubes having a plurality of sheath portions laterally coupled together are passed through the inside of the gutter or drain pipe, and wherein the optical fiber cables are passed through the sheath tubes.

7. The method of distributing and laying optical fiber cables of any one of claims 1 to 3, wherein a support having concavo-convex portions capable of arranging and supporting a plurality of optical fiber cables is disposed inside the gutter or drain pipe.
